2:Lewis E-5 (1943-1948) 1951 NU37 Tepoztlan NU37

with cattle brought in from Guerrero in the belief that the animal would forget its past home.

Milk products are used for medicinal purposes. Whey, cheese, and butter are used for skin rashes, and cheese is used as a poultice for snake bites. Some families use, as a purgative, milk in which a cow's tail has been soaked. Pig's fat is commonly used as a salve for inflammations.

CHARCOAL

The production of charcoal by the burning of oak and other woods is one of the most important sources of income for many Tepoztecan families, but primarily for the poor. Charcoal production demands very little capital and few tools; it utilizes the communal forest resources; it serves as a convenient source of income for the landless peasants and as a supplementary source of income for those engaged in agriculture. As a rule, charcoal production is carried on as a part-time activity by farmers during the slack season. But in the smaller barrios of San Pedro, Los Reyes, and San Sebastián, about fifteen individuals engage in charcoal production as a full-time occupation.

Charcoal production has risen and fallen at different times in recent Tepoztecan history. Charcoal production on a large scale began shortly after the Revolution, when Tepoztecans returned to the village from their enforced exile. Desperately poor and with all their animals killed off, they eagerly turned to charcoal as salvation. This development was encouraged and organized by a provisional president of the municipio, Jesús Monroy, who was imposed by the state authorities in 1919 shortly after peace was established in the village. Monroy called a meeting of Tepoztecáns and organized workers into brigades of charcoal burners. As a result, a large portion of the forests of Tepoztlán was practically denuded, and there arose in the village a cleavage between those who wished to conserve the forest resources and those who cut the trees for charcoal.

During the late twenties, Tepoztlán organized a forestry cooperative, the first in the state of Morelos, and large-scale production began again. Conflict ensued and the cooperative ceased to exist in 1937. Since that time, charcoal production has continued on an individual basis. Data on charcoal production in the municipio are available for the years 1934–42. (See Table 41.) During this period 3,921,515 pounds of charcoal were produced. These figures are in all probability lower than the actual amount, for much charcoal is produced secretly in violation of federal forestry regulations.

The tools used in charcoal production are an ax, a shovel, a pickax, and a machete. Charcoal workers generally leave the village for the mountains in the early morning, going alone or in groups of two or three friends or relatives. It is not customary to hire workers in this occupation, because most workers want to come home at the end of the day, and charcoal burning necessitates staying out for a few days at a time. To make charcoal, oak and sometimes pine trees are felled cut up into logs a few feet long, and piled upright to form a charcoal oven or
